Experiment 5

Student Name: Samarth Yadav

Branch: CSE

Semester: 6th

Subject Name: Advanced Programming - 2

UID: 22BCS13134

Section/Group: 637-B

Date of Performance: 20/2/25

Subject Code: 22CSH-351

Ques 1:

Aim: Same Tree

Code:

```
class Solution(object):
    def isSameTree(self, p, q):
        if not p and not q:
            return True
        if not p or not q:
            return False
        if p.val != q.val:
            return False
        return self.isSameTree(p.left, q.left) and self.isSameTree(p.right, q.right)
```

Ques 2:

Aim: Symmetric Tree

Code:

```
class TreeNode:
    def __init__(self, val=0, left=None, right=None):
        self.val = val
        self.left = left
        self.right = right

class Solution:
    def isSymmetric(self, root):
        if not root:
            return True
        return self.isMirror(root.left, root.right)

    def isMirror(self, t1, t2):
        if not t1 and not t2:
            return True
        if not t1 or not t2:
            return False
        if t1.val != t2.val:
            return False
        return self.isMirror(t1.left, t2.right) and self.isMirror(t1.right, t2.left)
```

Ques 3:

Aim: Balanced Binary Tree

Code:

```
class TreeNode:
    def __init__(self, val=0, left=None, right=None):
        self.val = val
        self.left = left
        self.right = right

class Solution:
    def isBalanced(self, root):
        def height(node):
            if not node:
                return 0
            left, right = height(node.left), height(node.right)
            if abs(left - right) > 1 or left == -1 or right == -1:
                return -1
            return max(left, right) + 1

        return height(root) != -1
```

Ques 5:

Aim: Count Complete Tree Nodes

Code:

```
class TreeNode:
    def __init__(self, val=0, left=None, right=None):
        self.val = val
        self.left = left
        self.right = right

class Solution:
    def countNodes(self, root):
        if not root:
            return 0
        lh, rh = self.getHeight(root.left), self.getHeight(root.right)
        if lh == rh:
            return (1 << lh) + self.countNodes(root.right)
        else:
            return (1 << rh) + self.countNodes(root.left)
    def getHeight(self, node):
        h = 0
        while node:
            h += 1
            node = node.left
        return h
```
